

SECURITY

IMPACT ANALYSIS

Do you know your current security risk profile?

What are the most urgent areas of vulnerability, or security challenges, within your organization?

Are you able to keep up to date with the fast moving and complex threat environment?

Previously, external security threats were dominated by malicious hackers attempting to propagate malware and viruses. Today's attackers, however, are much better organized and financially motivated. Criminals are using organized channels and directing sophisticated stealth attacks specific targets in order to maximize financial gains. These criminals are also much better equipped to quickly adapt to new security measures and develop new attacks.

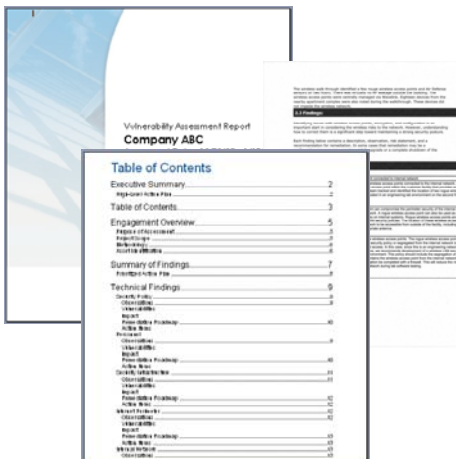

Companies are also finding that while they must protect themselves from these external threats they are just as susceptible, if not more susceptible, to insider threats. Insider threats can range from criminal activity such as stealing Intellectual Property (IP) or customer information, to unintentional loss of data caused by user negligence or lack of skill.

In this fast-changing and complex environment businesses find themselves struggling to manage and maintain an appropriate level of security and adequately protect their information assets.

The Security Impact Analysis is a broad, environmental investigation that provides experienced independent analysis for assessing your current security state and delivers recommendations for improving your overall risk profile. This service provides:

- The ability to engage security skills without additional hiring or internal training.
- Identification of your current risk profile.
- Prioritized, actionable recommendations to remediate the identified risks.
- Un-biased recommendations from a vendor-independent source.
- Results are applicable to compliance requirements for self-assessment.

As part of the Impact Analysis GlassHouse will:

- Perform network security scans
- Review documentation and conduct interviews to identify security concerns in security organization, procedures and architecture
- Review the current network architecture and security controls
- Review incident detection and response procedures
- Identify areas of risk and document vulnerabilities
- Provide prioritized remediation recommendations and strategies for addressing security gaps
- Deliver a final report and presentation detailing findings and potential impacts to business

GlassHouse Technologies is a global provider of data center infrastructure consulting services. Focused on data center consolidations, virtualization, security, storage, data protection and managed services, GlassHouse consultants offer a vendor-independent approach to architect, implement and operate IT environments that drive high performance and agility through cloud computing and a service provider model. GlassHouse transforms infrastructures to deliver high value services that align to business needs, enabling cloud computing and accelerated return on investments while mitigating operational inefficiencies and risk. This is provided through Transom, a unique delivery framework comprised of proprietary software tools, methodologies and domain expertise. Visit the GlassHouse blog for expert commentary on key data center issues facing today's enterprises and follow us on twitter at #GlassHouse_Tech.
